what is the amount for communications ?

-3-

Technology of Iron Fortification). This increases the number of task force meetings to be held from six (6) to twelve (12); i.e. six (6) Task Forces over and above the original number designated in the grant, and thus increases by 100% the costs of task forces assigned to the grant implementation.

In reference to the publication of Peter Dallman's report on "Iron Deficiency in Infancy and Childhood", 5,000 copies instead of 500 copies were printed (see C. Reports, 1). The IMAC Secretariat has distributed the majority of the 5,000 copies of "Guidelines for the Eradication of Iron Deficiency Anemia" and would like to be able to budget a printing of another 5,000 copies as this document is widely distributed.

We will publish and distribute a minimum of three substantial monographs in the year 1980. Under these circumstances, the proposed budget is as follows:

Categories	Amount 1980
Conferences	
International Travel	\$46,692.00
Task Force Meetings	
International Travel	23,000.00
Domestic Travel	18,000.00
Per Diem	
International	11,000.00
Domestic	3,500.00
Communications	2,500.00
Reports/Publications/Secretarial	7,500.00
Editorial Services	3,000.00
Supplies	2,000.00
Meeting Room Rentals	1,500.00
Documentation	3,500.00
Consultation Services	6,000.00

who were stationed in the store to answer questions from the shoppers?

Dear Bob:

The Ad Hoc Working Group of the Subcommittee of Nutritionists met with the development of a plan for the Giant Food Store as proposed by Dr. Meyer met last week in Washington. A Public Health Nutritionist who had worked on development and execution of a supermarket project in Washington funded by the Regional Medical Program met with us. I think we benefited a great deal from the experiences of that group. In that particular program, decisions were stationed in the store to answer questions from the shoppers. They felt the response to this was good. However, their chance to evaluate it was unsuccessful. They handed a questionnaire to the shoppers requesting them to return it completed within a designated period of time. Consequently, few were returned. They also prepared and distributed literature containing shopping hints for a fat-controlled diet. The store personnel prepared posters on the benefits of certain food stores and hung them in strategic places in the store. Labels designating recommended low saturated fat and acceptable low saturated fat products were placed under the appropriate grouping of such foods. In this case, the store was constantly changing the location of foods, thus making the labels meaningless.

After exploring several ideas of things that could be done in a supermarket setting and still avoiding the endorsement problem, we felt that one of the most effective things we could do would be to prepare a packet of materials to be sent to the stores for the large grocery chains for their use in various ways. The packet would consist of materials such as the following:

1. The Way to a Man's Heart
2. The Recipe Booklet
3. Save Food Dollars and Help Your Heart
